1378. Replace Employee ID With The Unique Identifier

Easy Topics Companies

SQL Schema > Pandas Schema >

Table: Employees

Column Name	Type
id	int
name	varchar

id is the primary key (column with unique values) for this table. Each row of this table contains the id and the name of an employee in a company.

Table: EmployeeUNI

2K 216 67 Onl

MySQL Auto

```

1 # Write your MySQL query statement below
2 select e2.unique_id,e1.name from employees as e1 left join employeeuni as e2 on e1.id = e2.id;

```

Saved Ln 1, Col 1

Testcase Test Result

Accepted Runtime: 95 ms

Case 1

Input

Employees =

id	name
1	Alice
7	Bob
11	Meir
90	Winston
3	Jonathan

EmployeeUNI =

id	unique_id

1068. Product Sales Analysis I

Easy Topics Companies

SQL Schema > Pandas Schema >

Table: Sales

Column Name	Type
sale_id	int
product_id	int
year	int
quantity	int
price	int

(sale_id, year) is the primary key (combination of columns with unique values) of this table. product_id is a foreign key (reference column) to Product table. Each row of this table shows a sale on the product product_id in a certain year.

1.5K 173 37 Online

MySQL Auto

```

1 # Write your MySQL query statement below
2 select p.product_name,
3 s.year,
4 s.price
5 FROM product p
6 JOIN sales s

1280. Students and Examinations

Easy Topics Companies

SQL Schema > Pandas Schema >

Table: Students

Column Name	Type
student_id	int
student_name	varchar

student_id is the primary key (column with unique values) for this table. Each row of this table contains the ID and the name of one student in the school.

Table: Subjects

```

1 # Write your MySQL query statement below
2 select
3   st.student_id,
4   st.student_name,
5   s.subject_name,
6   count(e.subject_name) attended_exams
7 from
8   students st
9 cross join subjects s
10 left join Examinations e
11 on
12   e.student_id=st.student_id and
13   e.subject_name =s.subject_name
14 group by st.student_id,s.subject_name
15 order by st.student_id,s.subject_name;

```

Accepted Runtime: 119 ms

Case 1

Input

Activate Windows

570. Managers with at Least 5 Direct Reports

Medium Topics Companies Hint

SQL Schema > Pandas Schema >

Table: Employee

Column Name	Type
id	int
name	varchar
department	varchar
managerId	int

id is the primary key (column with unique values) for this table. Each row of this table indicates the name of an employee, their department, and the id of their manager. If managerId is null, then the employee does not have a manager. No employee will be the manager of themselves.

```

1 # Write your MySQL query statement below
2 SELECT f.name FROM employee f WHERE f.id IN ( SELECT m.managerId FROM employee m JOIN employee e ON e.id = m.
3   managerId GROUP BY m.managerId HAVING COUNT(m.managerId) >= 5 );

```

Accepted Runtime: 77 ms

Case 1

Input

Employee =

id	name	department	managerId
101	John	A	null
102	Dan	A	101
103	James	A	101
104	Amy	A	101
105	Anne	A	101

1204. Last Person to Fit in the Bus

Medium Topics Companies

SQL Schema Pandas Schema

Table: Queue

Column Name	Type
person_id	int
person_name	varchar
weight	int
turn	int

person_id column contains unique values.
This table has the information about all people waiting for a bus.
The person_id and turn columns will contain all numbers from 1 to n, where n is the number of rows in the table.
turn determines the order of which the people will board the bus, where turn=1 denotes the first person to board and turn=n denotes the

1164. Product Price at a Given Date

Medium Topics Companies

SQL Schema Pandas Schema

Table: Products

Column Name	Type
product_id	int
new_price	int
change_date	date

(product_id, change_date) is the primary key (combination of columns with unique values) of this table.
Each row of this table indicates that the price of some product was changed to a new price at some date.
Initially, all products have price 10.

Write a solution to find the prices of all products on the date 2019-08-16.

1.4K 216 34 Online

Code

MySQL Auto

```

1 # Write your MySQL query statement below
2 select product_id, 10 price from products where change_date > '2019-08-17' group by product_id, change_date having count(*) < 2
3 union
